WORK EXPERIENCE

Freelance | FullStack Developer
Enero 2022 – Present

I have developed Fullstack projects for several clients, leading the end-to-end creation of applications, designing attractive and responsive interfaces, managing servers and databases and handling server-side logic. I have worked directly with clients and also executed personal projects to keep improving.

SENA | Product Manager
Marzo 2020 – Noviembre 2021

I led a team in designing an innovative prototype to address water waste, efficiently coordinating the creation of an Arduino device. In addition, I developed and executed strategies to achieve product goals, collaborated with cross-functional teams and conducted market research.

PROJECTS

Unance

Personal Financial Management Software
It uses the following technologies: Typescript, React, Graphics, Express, SQLite and JWT.

README generator

Web application for readme generation
Uses the following technologies: Javascript, React, Graphics, Express, SQLite and JWT.chatgpt

CURSOS

- Responsive Web Design
- JavaScript Algorithms and Data Structures
- Basic Programming Course
- Basic Linux Course
- Implementing a Control System with Java Programming Language and Arduino

ABOUT ME

I am looking for exciting opportunities to apply my experience as a Fullstack Developer, focusing on innovative, creative and efficient problem solving with software development. My goal is to continue to grow and contribute to the success of dynamic and challenging teams in the technology world.
